

Water Weather Station

Client: Erik Fretheim

492 Team: Emma Geary, Garrett King, Kaitlyn Rice

Project Description

The WWXS will offer a unique way of keeping students engaged beyond the end of their camp. The buoy will allow for physical interaction with a device that creates useful data. With a higher level of user interaction Users will be more likely to retain the skills they have learned at the Sea Discovery Camp.

Cybersecurity student Ian Burnett, 10 from Dupont, brings up a water sample with the help of SEA Discovery Center assistant Sam Larson, center. *Larry Steagall / Kitsap Sun*

This is you!

- Work as an instructor at the Sea Discovery Center
- Manage a group of Middle School aged students
- Love water and computers (especially in tandem)

But first, what is going on?

Buoy

Emma Geary

Buoy Details

- Collects and stores sensor data
 - Turbidity, insolation, salinity, temperature
- Updates
 - App connectivity, battery life

App

Garrett King

Updates:

Web API

- Functional sending of data from the app to the web server

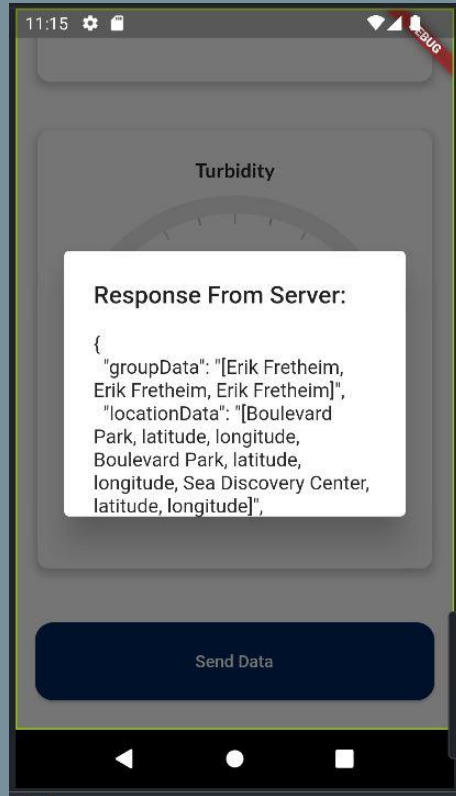

UI upgrades

- Date collected
- Small style changes to data display screen

App Screens

Web API

A red buoy with a ladder on the water. The buoy is red and has a white ladder attached to it. It is floating on a dark blue body of water under a clear blue sky. The buoy is positioned in the lower-left quadrant of the image.

Website

Kaitlyn Rice

Updates:

- Connected Website and App
- Technical Info: Website receives data as an array of arrays
- Displays real-time data in a table with associated graphs as representation

Real-time Buoy Data

Data Displayed in Graphical Format

Current State v. Future Goals

- Buoy > App > Website connection is working
- Buoy battery life has increased
- All current sensors returning correct values
- App correctly displays data + beautified

- Reorganize buoy
- Add more sensors (i.e. oxygen)
- Allow multiple users to access a single buoy + added security
- Site beautification
